

Playmeans

exploratory data analysis using music from Spotify

Davit Khachatryan, Babson College

- Playmeans is a shiny app, publicly available and free to use
- Let's you acquire data on your favorite artists from Spotify in real time
- The data are analyzed through histograms, K-means clustering, etc.
- Visualizations have audio features, so clicking on graphs plays music
- Playmeans supports inclusion and engagement as you analyze discography of *your* favorite artists rather than using a generic dataset
- Scan the QR code for the recent JSDSE article related to Playmeans!
